

Introduction

Lipe have been noted for their range of hi torque, high performance CV clutches for over 50 years. Designed and built in the UK at our R & D and manufacturing centre in Haslingden, our ranges of pull and push type clutches suit virtually every heavy duty application on the roads today including a comprehensive range of spring diaphragm clutches suitable for vehicles from 7 tonne upwards.

This catalogue shows the Lipe Clutch Pack number in the highlighted column.

This pack includes cover and disc(s) and also a bearing in most cases.

The three following columns show the individual part numbers.

Our website www.setcoauto.com has all the latest models added to the site as soon as they are released.

Instruction for installation of flat flywheel adaptor kit for 14-2 LP Models

Fitted in Leyland Constructor with 8.25 DAF engine

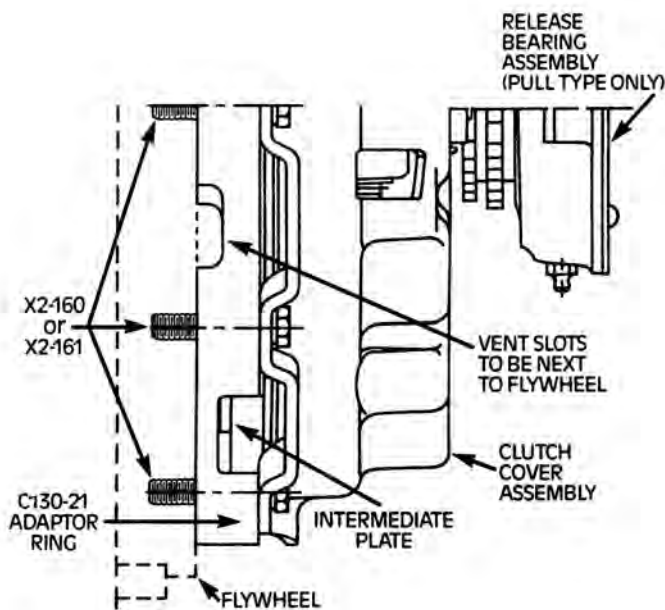

Carefully inspect the flywheel for scores, heat cracks, taper and parrallelism to the crankshaft mounting surface. Remachine if necessary. If the flywheel is severely heat checked or worn it should be replaced.

We suggest that standard $\frac{3}{8}$ " x 16 UNC cap screws 3" long be used as pilots. Cut the heads from these cap screws, saw a screw driver slot in the end and install them in opposite holes in the flywheel. These pilots will support the adaptor ring as the clutch is installed.

Position the adaptor ring on the flywheel, ensuring that the ventilating slots are on the flywheel side.

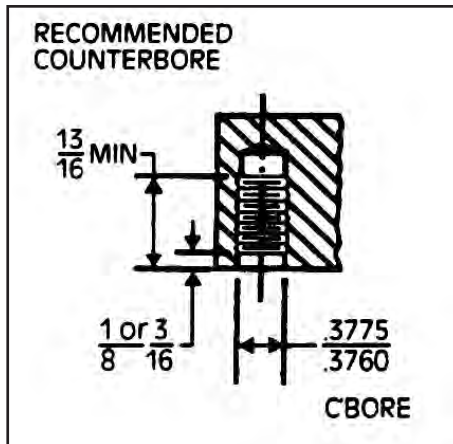

With a spline alignment tool, align the driven discs and intermediate plate in the flywheel adaptor ring. Attach the clutch cover assembly to the flywheel using the 12 cap screws provided in the adaptor kit. Do not tighten any cap screws until all 12 have been installed and finger tight.

The AK-L0974 has (12) X2-37 cap screws 2" long and can only be used on flywheels with fully tapped clutch mounting holes, ie. not counterbored. This applies to DAF 8.25 litre engines only.

Information Letter 14

Flywheel Saver Kit

**AK-L1109 for 13/330 and
AK-L1110 for 14" Single Plate Clutches**

Lipe have developed a Flywheel Saver Kit that will make a worn flywheel serviceable again without the need for expensive regrinding and downtime.

The flywheel Saver Kit is suitable for the Cummins 6B range of engines with an Eaton gearbox as fitted to ERF E6 and ES6 as well as the Ford Cargo 1218 to 1718.

The kit consists of a flywheel face plate, bolts, washers, release bearing, release bearing carrier and flywheel spigot bearing.

Important

Before fitting the Lipe Flywheel Saver Kit it is recommended that you check the clutch mounting bolt drillings in the flywheel to ensure they comply to the drawing illustrated. If the bolt counterbore is not as shown, the clutch mounting bolts will be bottom out, thus not securing the clutch to the flywheel.

Information Letter 27

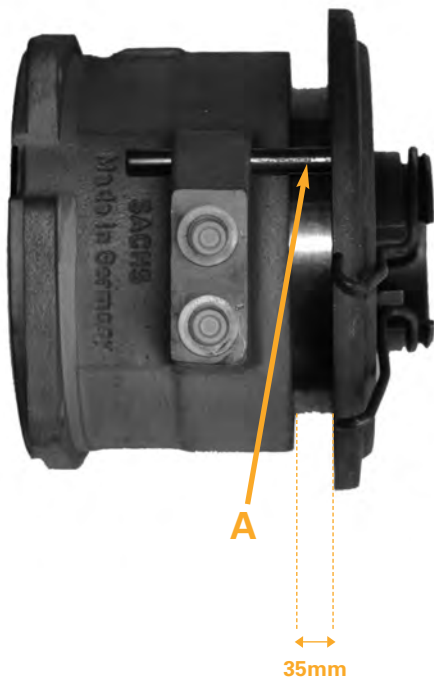

380mm Heavy Duty Ceramic Assemblies for Iveco Vehicles fitted with a 406mm Clutch Assembly.

Spline Size 2" x 10
Disc Assembly
Part No. 380-609-L1188

Spline Size 1³/₄" x 10
Disc Assembly
Part No. 380-609-L1189

Both discs are designed to fit under the original Iveco
clutch cover assembly.

MAN Integral Slave Cylinder

IMPORTANT
Clutch Pack LP-L1654-607 and
Kits AK-L1615, AK-L1616, AKB-L2079

Having completed the clutch installation and before re-installing the transmission, the integral slave cylinder piston must be extended until the 35mm dimension is obtained.

This is achieved by pushing the spiral pins 'A' towards the front of the transmission ie. towards the clutch cover assembly.

Note: adjustment of the slave cylinder piston cannot be carried out once the transmission is installed..

If a new slave cylinder has been fitted the piston will be pre-set at 35mm, but it is recommended that this is checked.

Information Letter 30

Lipe DLPS Clutch Packs

LP-L1868AK-608
5 PADDLE DISC
2 OFF
1800 LBS FT

LP-L1868AK-688
4 PADDLE DISC
2 OFF
1422 LBS FT

Lipe's DLPS clutch packs are a direct interchange with the Eaton/Fuller (Spicer) 7 spring dampener clutch fitted on ERF, Foden and Seddon Atkinson vehicles with the Cummins M11 engines. These engines have a flywheel internal diameter of 10.125" which accepts the larger dampener centre. The major difference between the Lipe and Eaton/Fuller (Spicer) is the driven discs.

The 4 and 5 paddle Lipe discs are totally symmetrical, allowing the parts to be either way. The clutch packs contain all the components needed to retro-fit the Lipe clutch onto either the Cummins or Perkins engine.

LP-L1868AK-608 comprises:

LP-L1868-608 Clutch Pack
 1-off Adaptor Ring
 2-off UNC Capscrews
 2-off UNF Capscrews
 2-off UNC $\frac{7}{16} \times 2\frac{1}{2}$ " Bolts
 2-off UNF $\frac{7}{16} \times 2\frac{1}{2}$ " Bolts
 2-off $\frac{7}{16}$ Spring Washer

LP-L1868AK-688 comprises:

LP-L1868-688 Clutch Pack
 1-off Adaptor Ring
 2-off UNC Capscrews
 2-off UNF Capscrews
 2-off UNC $\frac{7}{16} \times 2\frac{1}{2}$ " Bolts
 2-off UNF $\frac{7}{16} \times 2\frac{1}{2}$ " Bolts
 2-off $\frac{7}{16}$ Spring Washer

Note: for service installations full kit LP-L1868AK-608 or LP-L1868AK-688 must be fitted.

Scania Integral Slave Cylinder

IMPORTANT

Lipe Clutch Kit for Scania 4 Series Vehicles AK-L1683, AKB-L2017, AKB-L2014

Having completed the clutch installation and before re-installing the transmission, the integral slave cylinder piston must be extended. The following method is recommended by Scania (GB) Ltd.

1. Lightly lubricate the spring pins 'A' with an anti-corrosive oil.
2. Check piston/clutch retaining ring for wear and change if worn.
3. Extend the slave cylinder piston forward until the end of the spring pins 'A' are level with the rear face of the bosses which the spring pins slide through.
4. Align the gearbox and push into position when the slave cylinder piston engages into the diaphragm spring. A click can clearly heard.

Note: It is very important when installing the gearbox to control its vertical and horizontal position. This is so that the slave cylinder piston and retaining ring are not damaged during fitment.

Do not squeeze the ends of the retainer ring after assembly as the slave cylinder may become detached from the diaphragm.

Lipe cast cover assemblies interchange with press steel covers.

1. Open

2. Insert shaft

3. Shaft

BK312 & BK313 Fitting Instructions

1 3/4" & 2" Spline

Initially Ensure the transmission is in gear, the clutch is correctly adjusted (1/2" gap between the release bearing housing and clutch brake) and make sure the clutch linkage allows the release bearing to contact the clutch brake.

Step 1 Insert a screwdriver into the slot by the roll pin and separate.

Step 2 Open the clutch brake as wide as possible.

Step 3 Install the plastic button side toward the transmission cap.

Step 4 Place the clutch brake over the input shaft and insert the the drive tang closest to the expansion pin into the shaft so that it snaps into position.

Step 5 To automatically set the pin (after snapping the clutch brake together), fully depress the clutch pedal to depress the pin into position.

Step 6 Visually verify the plastic button is seated flush with the friction material on the clutch brake. If not, repeat Step 5.

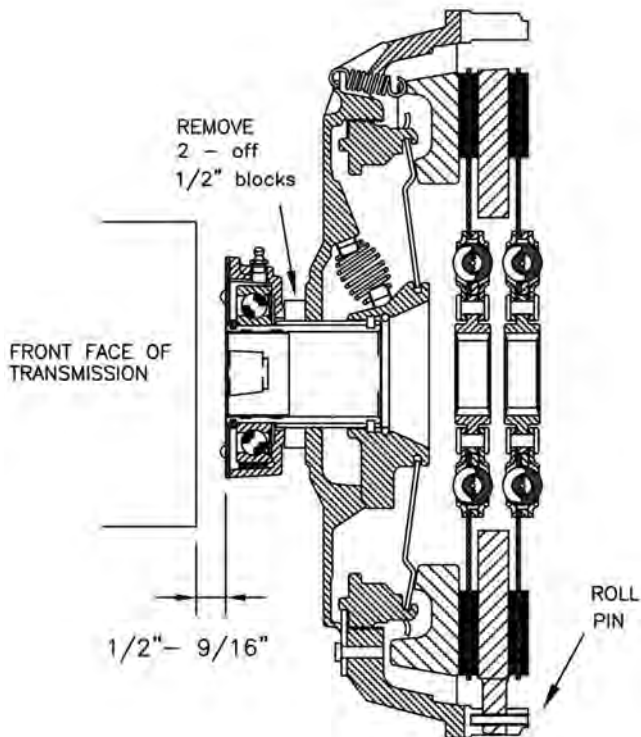

Warning Incorrect clutch adjustment will prevent the roll pin from being fully seated and will cause the assembly to come apart during the operation.

Clutch Brake Removal Instructions

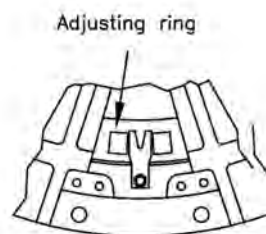

Remove the transmission inspection cover. Insert a screwdriver into the slot by the roll pin and separate.

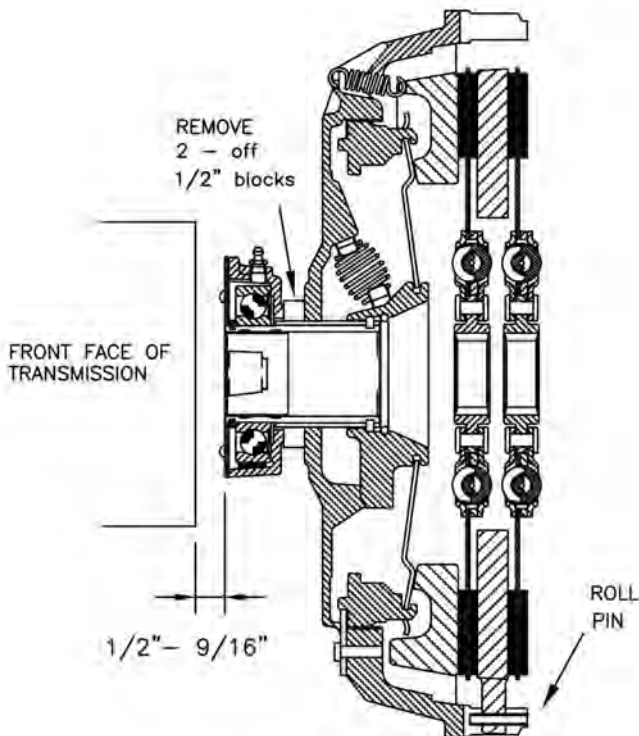

Information Letter 37

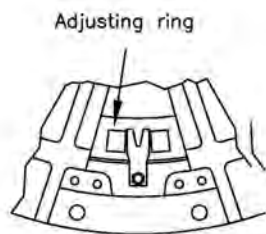

1. Before installing the clutch, check the flywheel for wear.
2. Apply Lipe Spline Lube to the disc hub splines and input shaft spline.
3. Install clutch to flywheel face.
4. Adjust clutch by removing lock strap and turning adjusting ring to allow the two shipping blocks to fall out. Note: fitter or service engineer must ensure both blocks are removed from clutch before installing transmission.
5. Install transmission
6. Re-adjust clutch until the gap between the front face of the transmission and the release bearing is as per the vehicle manufacturer's specification ($1/2'' - 9/16''$).

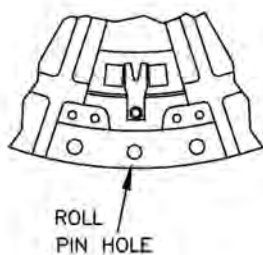

Turn the adjusting ring clockwise to decrease the gap between the front face of the transmission and the release bearing.

1. Before installing the clutch assembly, check the flywheel for wear.
2. Apply Lipe Spline Lube to the disc hub splines and input shaft spline.
3. These units are supplied with Lipe DLPS disc assemblies. The disc assemblies are symmetrical. They can be fitted in either flywheel or pressure plate positions.
4. Install the clutch assembly to the flywheel face.
5. Adjust clutch by removing lock strap and turning adjusting ring to allow the two shipping blocks to fall out. Note: the dummy input shaft must be left in situ while carrying out instructions detailed in (4) & (5).
6. Before installing transmission, gently tap the four roll pins forward in the intermediate plate lugs onto the flywheel face through the four holes in the the cover assembly.
7. Install transmission
8. Check clutch adjustment between transmission face and release bearing as per vehicle manufacturer's specification. Note: normally $1/2'' - 9/16''$

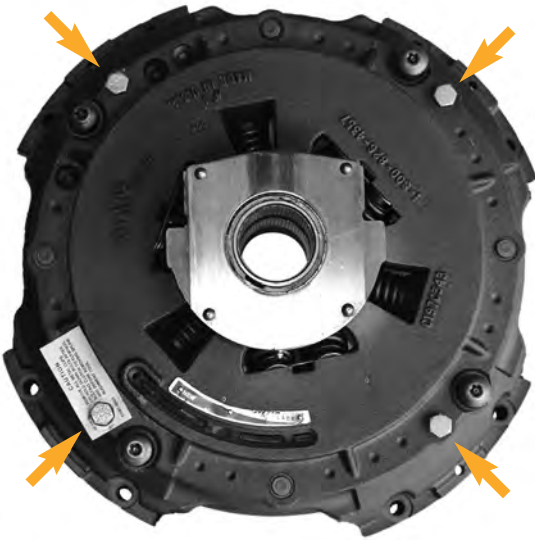

Turn the adjusting ring clockwise to decrease the gap between the front face of the transmission and the release bearing.

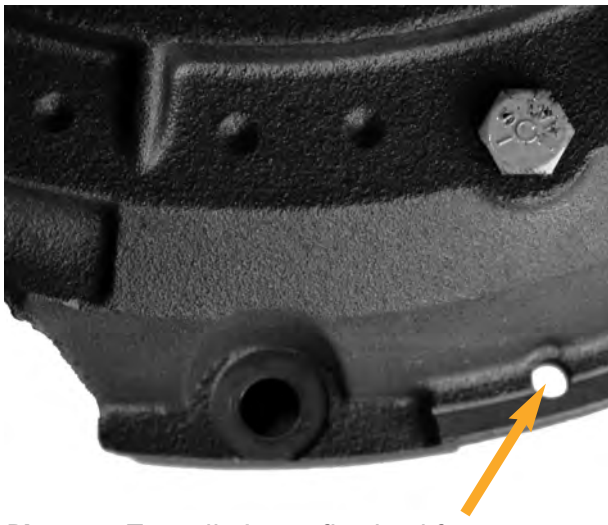

ROLL PIN HOLE

Information Letter 43A

15¹/₂-2 Solo SP-L2566

1. Before installing the clutch assembly, check the flywheel for wear.
2. Apply Lipe Spline Lube to the disc hub splines and input shaft.
3. These units are supplied with DLPS disc assemblies. The disc assemblies are symmetrical. They can be fitted in either flywheel or pressure plate positions.
4. Install the clutch assembly to the flywheel.
5. Remove the 4 yellow coloured shipping bolts in a criss cross pattern (see picture 1). Note: save the 7/16 UNC 2" long bolts in case you need to remove and then reinstall the clutch. Before doing so contact Lipe for refitting procedure.
6. Before installing transmission, gently tap the four roll pins forward in the interplate lugs onto the flywheel face through the four holes in the cover (see picture 2).
7. Install transmission.
8. After the transmission and linkage has been reconnected, fully depress the clutch pedal five times to set the clutch.
9. Check wear indicator tab to see if it has moved to the new position. If not, disconnect the linkage and place a tube over the release arm and stroke the clutch manually five times to ensure the clutch adjusts to its new position.
10. Note: failure to set the clutch to the above procedure will result in premature failure and will nullify warranty.

380/400mm Twin Plate

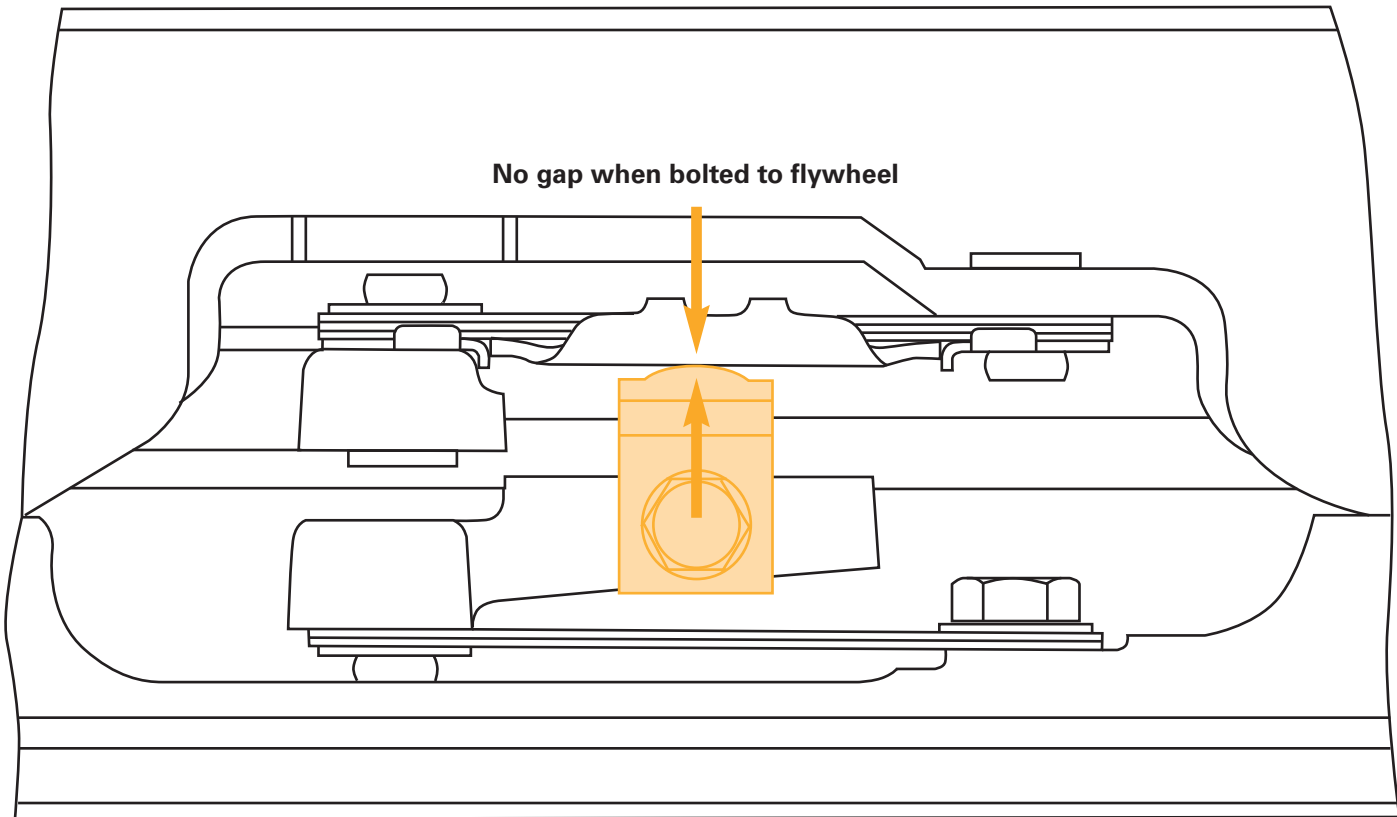

Before fitment;

- Check the flywheel face for wear (run out). The maximum allowable is 0.5mm [0.02"]

Once clutch is bolted to flywheel ensure;

- All four red spacer nuts are retrieved (380's only).
- The four bolts holding the cover to the adapter ring remain tight.
- The tee stops are lightly touching.

NOTE: Worn flywheels or discs will require Tee stop adjustment. Torque to 28N/M [21lb/ft] and thread-lock.

400mm Twin Plate

- 1) Check the flywheel face for wear (run out). The maximum allowable is 0.5mm [0.02"]
- 2) Ensure the four bolts holding the cover to the adapter ring remain tight after bolting to flywheel.
- 3) Check to ensure the Tee stops are lightly touching when the unit is fully bolted up to the flywheel.
 - Worn flywheels or discs will require Tee stop adjustment.

Note: Side Tee stops are pre-set (Torqued to 28 N/M [21lb/ft] and lock-tightened).
